

SEAL IT ACCELERATOR

ADDITIVE TO CURE SEAL IT LIQUID MEMBRANE

PART OF THE SEAL IT LIQUID ROOFING MEMBRANE SYSTEM

A gel-like additive, that once mixed with the Seal It Liquid Membrane, accelerates the curing process. This allows for installations to be carried out at temperatures below 5°C and permits work to be performed down to an impressive minus 20°C.

The gel is simply added into the membrane and mixed using a heavy duty mixing paddle, prior to roof application. Once incorporated, the gel helps to facilitate full cure at normal speed, on average 1mm per 24hrs, when the outside temperature is below 5°C.

Supplied in 1L bottles for easy dosing, the additive requires no special applicators. Mixing ratio is approximately 1L of ACCELERATOR to 20L of LIQUID MEMBRANE. For 5L of LIQUID MEMBRANE add 250ml of ACCELERATOR.

Benefits:

- Accelerates cure process of Seal It Membrane
- Easy to mix
- No special applicators required
- Application temp minus 20°C to + 5°C

Specification Summary

Application temperature	-20° to +5°C
Appearance	off-white paste
Shelf Life	12months

Code	Colour	Box	Size	Barcode
SLOCRSAC	off White	12	1L	810030760214
